

Aluminium Silver

Alloys Powder

An alloy is a mixture of chemical elements of which at least one is a metal. Unlike chemical compounds with metallic bases, an alloy will retain all the properties of a metal in the resulting material, such as electrical conductivity, ductility, opacity, and luster, but may have properties that differ from those of the pure metals, such as increased strength or hardness.

Aluminium Silver Alloy Powder have excellent mechanical properties, generally have high thermal and electrical conductivity, and are highly resistant to corrosion. Applications include general and mechanical engineering products, food manufacturing equipment, electronic parts, and aesthetic building components.

Stock No:

NS6130-12-001774

Formula

AlAg

Purity
99.9%

CAS : N/A

Form : Powder

APS:
30µm
