

Magnesium Nickel

Alloys Powder

An alloy is a mixture of chemical elements of which at least one is a metal. Unlike chemical compounds with metallic bases, an alloy will retain all the properties of a metal in the resulting material, such as electrical conductivity, ductility, opacity, and luster, but may have properties that differ from those of the pure metals, such as increased strength or hardness.

Stock No: NS6130-05-529

Formula MgNi

Magnesium Nickel Alloy Powder is master alloys of Magnesium with Nickel. Magnesium Nickel alloy is a maste alloy obtained by high-temperature melting and high density.

- Used as a negative electrode material for nickel hydride batteries
- Used as nodulariser in SG iron.
- Excellent reversible hydrogen storage properties.
- Internal combustion engine exhaust pipe
